

MRUDULA MAKAR

Pune, Maharashtra, India

+91 9834207759 | mrudmakar@gmail.com

linkedin.com/in/mrudula-makar | github.com/mrudo901

PROFESSIONAL SUMMARY

Computer Science student proficient in Java, Python, and AWS. Gained practical experience in Cybersecurity through remote internships of Tata Group. Strong foundation in Data Structures (DSA) and Backend Development, seeking a Software Engineering Internship.

EDUCATION

Pimpri Chinchwad University (PCU)

Bachelor of Technology in Computer Science

CGPA: 8.5 (Last Sem SGPA: 9.12)

Pune, India

2023 – 2027

Shardabai Pawar Vidyarniketan (SPVN)

HSC - Science (PCM with Computer Science)

Baramati, India

2021 – 2023

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, C++, SQL, HTML, CSS

Frameworks: Spring Boot, Node.js, NumPy

Tools/Cloud: Git, GitHub, Linux, VS Code

Core Concepts: Data Structures & Algorithms (DSA), OOP, DBMS, REST APIs, Cybersecurity

EXPERIENCE

Data Engineering Virtual Intern

AWS Academy

Remote

July 2024 – Sept. 2024

- Architected scalable data pipelines using AWS services to facilitate efficient big data processing and storage analysis.
- Designed cloud-based data storage solutions, optimizing data retrieval speeds for **large-scale datasets** and ensuring data integrity.
- Implemented cloud architecture best practices, **utilizing** AWS resource management for cost optimization and efficiency.

Cybersecurity Micro-Intern

Tata Group (Forage)

Remote

Oct. 2023 – Nov. 2023

- Executed comprehensive threat analysis and risk assessment scenarios to identify vulnerabilities and strengthen enterprise system defense mechanisms.
- Analyzed Identity and Access Management (IAM) policies, reducing unauthorized access risks by **20%** through stricter role-based controls.
- Optimized digital infrastructure security by simulating real-world cyberattacks and documenting remediation strategies.

PROJECTS

AI Aegis | Python, ML, Real-time Data Streams, International hackathon

Present

- Developed an automated security alerts for real-time threat natural disasters like floods, cyclones, utilizing machine learning algorithms to identify pattern anomalies.
- Collaborated with a cross-functional team to integrate predictive models, significantly improving the system's ability to detect zero-day vulnerabilities.
- Designed a scalable backend architecture capable of handling high-volume security data streams with low latency.

AI Cyber Mentor | Node.js, Bootstrap, Gemini AI API

Ongoing

- Engineered a responsive web-based platform to mentor users on cybersecurity risks, integrating the Gemini AI API for real-time security advice.
- Implemented automated data breach remediation plans, allowing users to generate instant action steps based on specific threat inputs.
- Built a user-friendly dashboard using Bootstrap and CSS to visualize personal risk scores and track learning progress.
